

Course: Advanced Databases

Assignment: Phase 1 - Data Model

Team Members: Tobiasz Bazan, Jakub Kamiński, Adam Ćwikliński

1. Application Domain

Topic: Running Tracking System

Description: A database system for a running application that records users' profiles, their overall workout sessions, and telemetry data such as heart rate. It also tracks the lifecycle of the runners' shoes, routes, and earned achievements.

2. Data Model Diagram & Specification

Entity-Relationship Overview (Associations):

- One **Runner** can have many **Shoes**, **Activities**, and **Achievements** (1-to-Many).
- One **Route** can be used in many **Activities** (1-to-Many).
- One **Activity** contains many points of **Telemetry_Data** (1-to-Many).
